### **High-Brightness LED Panel Mount Indicator Series From VCC Delivers Superior Daytime Visibility**

SAN DIEGO, CA (March 14, 2016) — VCC, the global leader in indication and specialty illumination solutions, has developed a new high brightness LED panel mount indicator series that achieves full brightness in microseconds - even in daylight viewing. Front panel snap-in mounting eases installation, leading to a significant reduction in assembly time and cost. Snaps fit into 0.500" (1.27mm) panel hole and requires no additional hardware. Well suited for new and retrofit designs, the 1092 Series LED panel mount indicators provide low energy consumption, fast on/off and low heat generation – enabling long operating life of more than 100,000 hours.

The LED panel mount indicators are shock and impact vibration resistant when used with a speed nut accessory, improving the overall reliability of the equipment. The 1092 Series is water, dust and oil resistant when used with an O-ring gasket accessory that also helps maximize the life expectancy of the equipment.

Available in four different lens styles, including hi hat, hi dome, semi dome and small dome, the customizable 1092 Series meets a wide range of application requirements. Offered in red, green and amber colors, the 12VDC and 48VDC LED indicators are designed with wire leads (4.4"/4.8") or tab terminal (0.187 x .020).

"VCC's new 1092 Series offers super bright LED panel mount indication and delivers superior daylight visibility," said Sannah Vinding, Director of Product Development and Marketing at VCC. "The LED panel mount indicator provides rugged and reliable performance in harsh environments, making it ideal for a wide range of applications."

Featuring a bezel finish and polished stainless steel, the 1092 Series is compliant with RoHS and REACH requirements. The 0.500" LED panel mount indicators are cULus listed.

The 1092 Series LED panel mount indicators can be used in automation & control, electrical control panel, food service, industrial, manufacturing, maritime, medical equipment, oil & gas, people mover, and transportation applications.

Customers can start to place orders with distribution on March 21, 2016 with small quantity inventory available almost immediately and larger production runs in the 6 week range.

### **About VCC**

Based in greater San Diego, California, Visual Communications Company, LLC, is the leader in illuminated components. VCC is the recognized leader in the development and manufacturing of innovative LED, incandescent, neon and specialty indicator light solutions and light pipes for global markets including aerospace, food service, people movers, transportation, medical, IoT and industrial. VCC provides custom and standard solutions with their design engineering expertise, superior customer service and broadest product line in the industry to exceed user experience. With 40+ years of experience, VCC and its distributors serve customers all over the world. VCC is changing the way of communication visually and indications needs.
