

Lamp Cross-reference

This cross-reference includes industry-standard incandescent bulbs and corresponding VCC LED lamps. Many configurations, options, and colors are available within each model. We strongly suggest evaluating samples of any product prior to purchase.

VCC LED lamps offer significant cost-saving advantages over incandescent bulbs:

- 100,000-hour life vs. unpredictable incandescent bulb life
- cooler operation
- lower operating current
- vibration and shock resistance

VCC engineers have designed a vast product line to provide direct replacement of almost any incandescent bulb being used in illuminated push buttons, pilot lights, switches, or other indicator light applications.

Furthermore, VCC can modify most standard products or design an LED lamp to fit unique or custom applications. For technical support, please call us to discuss your application: (800) 522-5546.

To cross an incandescent bulb:

1. Locate the incandescent bulb number and the equivalent VCC LED lamp number in the cross-reference. The "X" in the VCC Part number is a variable representing the LED color (e.g. "R" for red, "G" for green, "A" for amber, "B" for blue, "O" for orange, "Y" for yellow, "W" for white) Verify your application parameters (actual supply voltage, built in resistor, socket type, polarity, ambient light conditions). Bi-polar options are available for most models.
2. Request a sample. For assistance us call at (800) 522-5546.
